

This paragraph has no `::before` pseudoelement. As the first element in the document flow, it should have a reading order of 1, but it doesn't; the `::before` pseudoelement with a `display` property of "block" precedes it.

This is a `::before` pseudoelement with a `display` property of "block". This paragraph has a floated `::before` pseudoelement with a `display` property of "block". In the document's tag structure, the `::before` pseudoelement's tag is a child of this paragraph's tag. Here is some additional text so that the float wraps properly.

This is a `::before` pseudoelement with a `display` property of "inline-block". This paragraph has a floated `::before` pseudoelement with a `display` property of "inline-block". In the document's tag structure, the `::before` pseudoelement's tag is a sibling of this paragraph's tag. Here is some additional text so that the float wraps properly.
